

Joint Evaluation with Major SI Company: Lifecycle Management of Server Certificates

Purpose of Evaluation

In a VMware virtualized server environment, whether it can build and operate secure network communication environment by replacing server certificates on VM hosts, VM mgmt server and various servers on guest Oses with Windows-PKI based server certificates.

Evaluation Environment

Evaluation Points

Cert Discovery: Discovers SSL certs on VM hosts, vCenter Server and services on each guest OS, generates a report.

Monitoring: Checks daily if proper SSL certificates are installed on servers.

Cert Lifecycle Mngmnt: Obtains certificates from Windows CA or external CAs and automatically install them on servers.

Alert Nofitication: Detects anomalies in cert monitoring and delays in processes and notifies administrator via emails.
